SUMMARY

Pega Certified Senior System Architect with four years of experience delivering auto-finance applications and enterprise integrations at Mercedes-Benz Research and Development India. Experience replacing SSIS batch processing with Kafka-driven workflows, automating production recovery, and building collections, remarketing, and customer-service solutions across APAC.

TECHNICAL SKILLS

Pega

PRPC 8.x, Pega Infinity, CPM, Case Management, Activities, Data Pages, Data Transforms, Report Definitions, Declarative Rules, Decision Rules, Circumstancing, SLAs, Guardrails, Constellation, DX API.

Integration & Data

Apache Kafka, REST, SOAP, OAuth 2.0, SFTP, JSON mapping, Data Flows, Datasets, Queue Processors, Connect-SQL, SQL Server, SQL, Stored Procedures, SSMS.

Delivery & Diagnostics

Deployment Manager, Dev Studio, App Studio, PDC, Tracer, PAL, Agile/Scrum, release management, L2/L3 incident resolution, monitoring and alerting, AI-assisted development.

PROFESSIONAL EXPERIENCE

Pega Developer

August 2022 – Present
Mercedes-Benz Research and Development India — Bangalore, India

Middleware Modernization & Event-Driven Integration — August 2025 – Present

- Engineered **metadata-driven integration without creating dedicated Pega properties for incoming data**: retrieved Dataset-stored mappings through Report Definitions at runtime, dynamically mapped incoming data, and executed SQL MERGE queries to populate dedicated target tables.
- Implemented event ingestion for **50+ Apache Kafka topics across 7 APAC markets** using Pega Data Flows, Datasets, and Queue Processors.
- Tuned the Pega integration workload to process **200,000 records in 15 minutes**, using AI-assisted analysis to identify performance bottlenecks.
- Reduced data availability delays from **approximately 25 hours to near real time** by replacing legacy SSIS batches with event-driven Kafka workflows.
- Standardized JSON mappings, Connect-SQL merges, and queue error handling across markets as part of modernization contributing to **estimated annual infrastructure savings of $200K**.
- Reduced dead-letter recovery from **roughly 2 hours to under 2 minutes** by building a Service-REST replay API.
- Built an AI-assisted utility to generate **draft Pega mappings for 50+ tables in 10 minutes**, retaining human review of the generated output.

Real-Time Operations Dashboard

- Built a Pega Data Pages dashboard to centralize **Kafka pipeline, queue-failure, and node-health monitoring** for incident investigation.
- Implemented **one-click Service-REST requeue**, KPI comparisons, and automated reports, with visibility into pod rotation and stream sessions.

PROFESSIONAL EXPERIENCE CONTINUED

Pega Developer

Mercedes-Benz Research and Development India — August 2022 – Present

APAC Collections, Remarketing & Customer Service — August 2022 – July 2025

- Delivered **30+ case types, flows, and enhancements** across APAC collections, debt recovery, remarketing, and customer service using Pega PRPC 8.x and CPM.
- Enabled business users to manage collection strategies through delegated rules, decision rules, and circumstancing, backed by reusable data models.
- Enabled **estimated annual savings of £20K** and legacy-server retirement by delivering Japan's SFTP integration with no go-live integration defects.
- Reduced manual data entry in the upstream system by implementing **API-based writeback**.
- Replaced **4 external messaging solutions** with localized SMS and correspondence frameworks, reducing messaging costs and reusing the SMS framework for **bulk SMS and email**.
- Coordinated **20+ production releases** for Pega applications with a **95+ Guardrail score** across APAC markets.
- Configured Pega SLAs and background processing for collections and customer-service workflows.
- Diagnosed L2/L3 production incidents across **7 markets** using PDC, Tracer, and PAL to analyze failures and deliver hotfixes.

BUSINESS USE CASE AUTOMATION

SELF-INITIATED PROJECT

Custom Real-Time Pager Application

Built a custom pager application to trigger **pager alerts via SMS** on failures, generate HTML reports, and escalate incidents to **15+ stakeholders**. Automated monitoring tasks contributed to **estimated annual support savings of $50K**.

SELECTED BUSINESS IMPACT

200K / 15 min
Workload Processing
AI-assisted bottleneck analysis and Pega integration tuning.

$250K
Estimated Annual Savings
$200K infrastructure savings and $50K support savings.

10 min
Draft Mapping Preparation
Generated drafts for 50+ tables; human review retained.

<2 min
Dead-Letter Recovery
From roughly two hours through a Service-REST replay API.

4
Messaging Solutions Replaced
Reusable, localized SMS and correspondence frameworks.

20+
Production Releases
Cross-market delivery for applications with a 95+ Guardrail score.

EDUCATION & CERTIFICATIONS

Pega Certified Senior System Architect (CSSA)

Pega Certified System Architect (CSA)

B.E. in Information Science & Engineering
Bangalore Institute of Technology, Visvesvaraya Technological University (VTU) | 2018–2022
